Introduction

Executive Summary

Conclusion

Introduction

The purpose of this executive summary report is to provide an overview of the external web application scanning results. The scan was conducted to assess the security posture of your organization's externally accessible web applications and identify potential vulnerabilities that could be exploited by malicious actors.

Scan Details

 Scan Date	01/07/2026 18:39:42 UTC
 Scan Duration	5 hours 1 minute
 Scanned IPs	66.208.20.26, 66.208.4.43, 66.208.4.44, 66.208.40.50, 71.26.57.129

Vulnerability Risk Rating

Vulnerabilities are broken down into four categories based on severity. Severity levels are categorized as follows:

- Critical

Vulnerabilities that pose a significant risk and could potentially lead to system compromise or unauthorized access.
This represents a CVSS Score of 9.0 – 10.0
- High

Vulnerabilities that have a substantial impact on the security of the system or application and should be addressed urgently.
This represents a CVSS Score of 7.0 – 8.9
- Medium

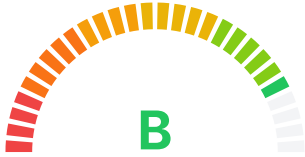

Vulnerabilities that have a moderate impact on the security of the system or application and require timely attention.
This represents a CVSS Score of 4.0 – 6.9
- Low

Minor vulnerabilities that have a limited impact on the security of the system or application but should still be remediated.
This represents a CVSS Score of 0.0 – 3.9

Executive Summary

Vulnerability Risk Score

Explanation

This represents a moderately strong vulnerability risk posture, with some vulnerabilities remaining present across your IT environment.

- A "B" vulnerability score indicates adequate security management but with remaining vulnerability exposure.
- The organization maintains reasonable cyber resilience but requires focused attention on closing security gaps.
- Continue addressing high-severity vulnerabilities and work downwards to improve overall security hygiene.

Vulnerability Count

IP Address	Critical	High	Medium	Low
66.208.20.26	0	0	0	6
66.208.4.43	0	0	0	4
66.208.4.44	0	0	0	2
66.208.40.50	0	0	0	3
71.26.57.129	0	0	0	2

Open Ports

 IP Address	Open Ports
 66.208.20.26	TCP →9002, 9001, 9000, 10001, 10000, 9003
 66.208.4.43	TCP →5101, 12000, 10001, 10000
 66.208.4.44	TCP →8443, 443
 66.208.40.50	TCP →5101, 10001, 10000
 71.26.57.129	TCP →8443, 443

Conclusion

External vulnerability scans are designed to take the attacker's perspective in identifying critical, high, medium, and low severity vulnerabilities that require attention to enhance the security and business resiliency of your organization's external-facing systems. Timely remediation of these vulnerabilities is crucial to minimize the risk of exploitation.

It is recommended to routinely conduct external vulnerability scans to complement your vulnerability management program to reduce both the probability and severity of threats, safeguarding organizational systems and data.
